

Environmental Policy Statement

The Oven Cleaning Group Ltd

The Oven Cleaning Group Ltd provides oven cleaning services for domestic ovens in both residential and commercial settings, cleaning products and training through our three brands:

- Oven Loving – oven cleaning services
- Home Loving – professional and retail cleaning products
- Oven Cleaning Training Academy – training services

Our business activities are delivered from our office and training facility unit, and at customer sites. This policy statement applies to all premises and mobile operations managed by the Oven Cleaning Group Ltd, and all UK employees and associates, where we have control and influence.

Environmental considerations are at the heart of what we do, reflected in our values and the development of products which are plant-based and biodegradable, vegan and cruelty free. We're not quite there yet with all our products but are working with our suppliers to achieve that. We are committed to complying with all legal and other relevant requirements relating to the environmental impacts of our operations, and to the prevention of pollution through the adoption of appropriate controls.

We recognise that our business activities will have both direct and indirect impacts on the environment. We are committed to understanding and minimising those impacts, which are primarily related to greenhouse gas emissions, resource use and the generation of waste, from:

1. The use of raw materials including water and generation of waste from the production and use of our products, and the services we provide to our customers
2. Business travel, including our mobile oven cleaning service
3. Office activities, including energy and water use, office equipment and consumables, and the generation of office waste
4. Procurement, including the business activities of our suppliers

We will aim to:

1. Adopt the highest environmental standards in all areas of operation, meeting and exceeding all relevant legislative requirements
2. Embed environmental and ethical considerations into the day to day operation of the business
3. Investigate, understand and where possible measure and quantify the negative environmental impacts and risks associated with our operations, products and services, and to minimise these impacts where possible. In particular we will aim to:
 - Minimise waste through careful and efficient design and use of our product family, packaging and other materials, promoting reuse and recycling
 - Continue research into the formulation of our products to reduce impacts in use and disposal
 - Monitor and minimise business travel and office energy use
4. Favour the use of suppliers who can demonstrate environmentally sound business practices, and wherever practical, procure products from local suppliers derived from sustainable resources
5. Educate employees, associates and customers in good environmental practice

This policy will be reviewed at least annually.
